

Six Degrees of Simulation, Incorporated has developed an affordable, self-contained desktop flight simulator, utilizing Lockheed Martin Professional Prepar3D®. Meet the “SIXPAC”.

Our desktop is an affordable system used for flight procedures, aircraft startup, flight, and shutdown. You can perform landing approaches, holding procedures, VOR tracking, fly pre-loaded missions or “Free Fly”.

Our device is designed to be used by anyone. No special training required. Our desktop comes complete with all features offered by Prepar3D such as 24,900 airports, realistic air traffic control, accurate topography and more.

PRICING

The SIXPAC comes complete with a licensed professional copy of Lockheed Martin Prepar3D®, including multiple cockpit configurations with an expandable aircraft database.
